

DATA Project

Instructional Strand Feedback

When participants have completed a training session for Strand 1 or Strand 2, and have successfully completed both the Participant Survey as well as the Pre-assessment survey for the Strand, feedback documents are sent to the sponsoring ESD. The ESD staff can then forward the district's information on to the district's contact person.

There will be 5 PDF documents in the reports folder.

1. Participants
2. Programs
3. Pre-assessment
4. Responses
5. Statements

In the PARTICIPANTS report the district will receive a listing of each person that participated in the training based upon completion of the Participant Survey. In addition the report will indicate if the person completed either Strand 1 or 2 training based upon completion of the appropriate Pre-assessment Survey.

The PROGRAMS report shows the responses made by participants regarding their awareness of 4 programs widely used in the state.

The PREASSESSMENT report shows the summarized responses from the participants who completed the appropriate Pre-assessment Survey. The first column shows the average of the responses made for each statement. The next column shows the standard deviation for those responses. If only one person responded, this column will be filled with "?". If the standard deviation is highlighted in yellow or red, it is an indicator that the responses are quite different across the respondents. Looking at the Responses report will allow the district to actually compare all of the responses gathered.

The next column is the aggregate average for the responses associated with a major focus area of the survey (generally 6-8 focus areas) which are indicated in the last column. Average scores less than 3 are highlighted in red, 3 to 4 in yellow, and 4 and above in green. This corresponds to: little use, beginning use, and experienced use.

The RESPONSES report simply shows all of the responses without names. The information here can be used if standard deviations are high or can be used to match up with the Statements Report.

The STATEMENTS report is a listing of each of the pre-assessment statements used in the pre-assessment survey. This report allows district to look at other report data and match it up to the actual statements.
